

DIMENSIONAL INSIGHT'S
**Healthcare Library of
Applications**

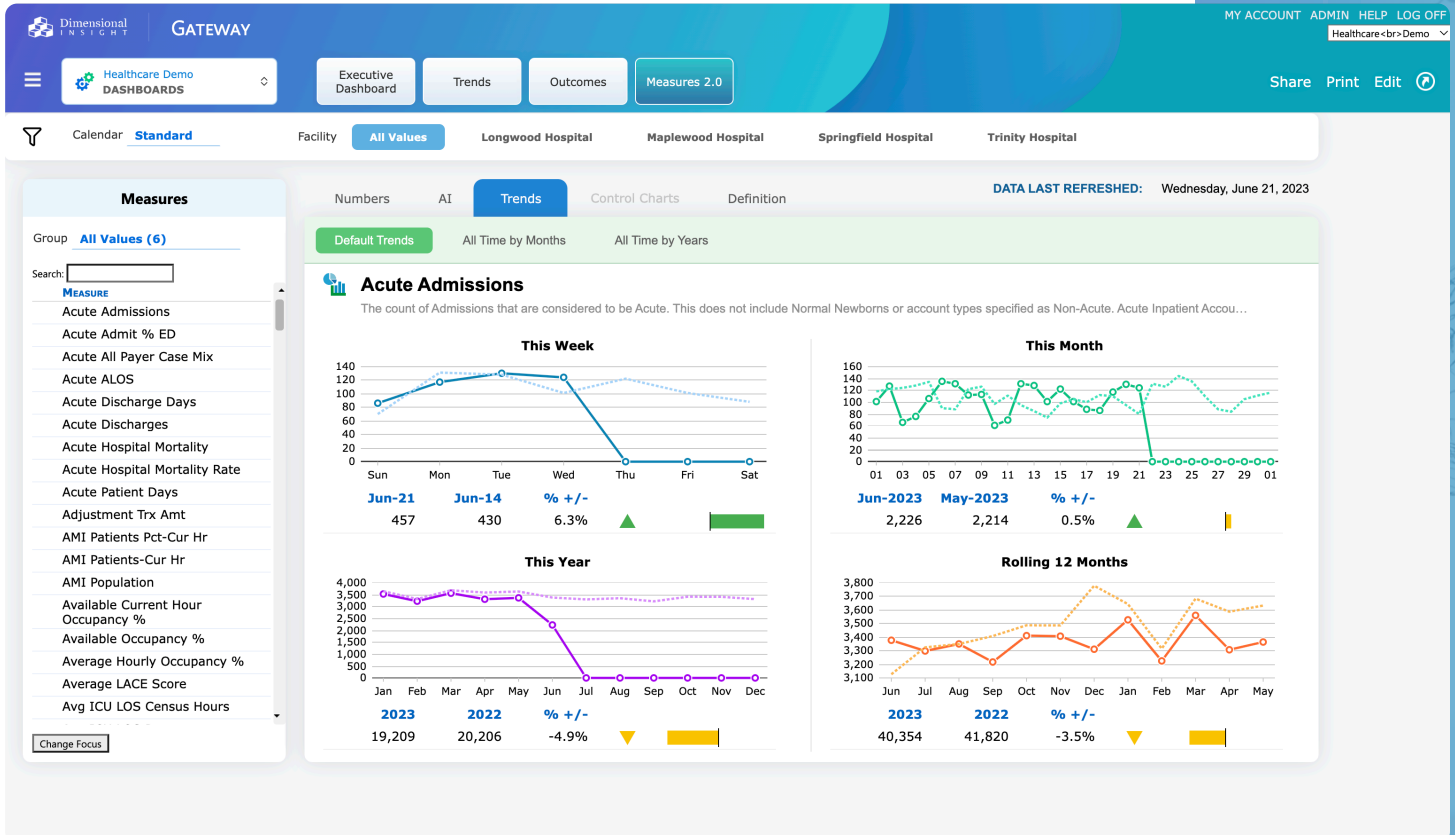

www.dimins.com

With our Library of Applications, you get easy access to ALL your data in one place.

Imagine an easy-to-use solution, housing data from across your hospital with personalized dashboards and reports at your fingertips. Enter our healthcare Library of Applications.

With applications across a variety of service lines, from surgery to revenue cycle to provider performance—our analytics applications help you meet all your clinical, operational, and financial KPIs.

Our customizable applications feature built-in measures, personalized shortcuts, governance, and built-in KPIs for quick wins and instant value.

Benefits of our Library of Applications

- ❑ See data from across the enterprise with multiple applications visually displayed in one library
- ❑ Personalize shortcuts to streamline your workflow via an easy-to-use interface
- ❑ Enable enterprise-wide data literacy through customizable measures, dashboards, and reports
- ❑ Gain quick ROI with more than 1,500 off-the-shelf measures for rapid deployment
- ❑ Extract and integrate data from multiple sources, targeting the unique requirements of the healthcare industry

Applications for the data you need—based on your role and your goal

Quick wins & time-to-value with our range of customizable applications tailored to meet your data needs.

Hospital Operations: Optimize hospital workflows and resource allocation to improve operational efficiency and improve patient care.

Ambulatory Operations: Get the most out of your ambulatory EHR data to manage patient flow, scheduling, and resources for improved service delivery and patient satisfaction.

Revenue Cycle Advisor: Optimize efficiency and maximize cash flow with more than 100 pre-built KPIs to help assess performance against targets.

Surgery Advisor: Manage your operating room facilities to peak levels, with maximized surgical performance based on data.

ED Advisor: Maximize the efficiency of your ED with data insights to optimize patient volume, increase throughput, and decrease patient wait times.

Outcomes Advisor: Track and improve quality measures, with more than 700 curated industry-standard KPIs and benchmark metrics, to optimize performance in the value-based care world.

ICU Advisor: Gain a complete view of ICU care—from arrival to discharge – to control costs, capture revenue, and improve patient care.

GL Advisor: Control costs, improve cash flow, and increase productivity with smarter insights into hospital finances.

Inventory Advisor: Streamline your healthcare supply chain and optimize cost-savings.

Orders Management Advisor: Monitor and track x-ray, lab, treatment, and prescription orders to ensure patient safety and smooth volume tracking.

Provider Advisor: Achieve compliance, improve practice patterns, and motivate physicians to excel with timely intel into physician performance.

Population Health Analytics: Improve clinical outcomes and lower readmissions with population-level data.
